SKILLS

- WordPress
- PHP, Laravel
- SCSS, Tailwind
- React
- Git

WORK EXPERIENCE

Full-stack Developer Freelancer 2024-NOW

After gaining experience in previous roles, I transitioned to working as a freelancer, expanding my skill set beyond traditional WordPress development. I started building more complex websites and web applications using modern tools and frameworks such as React, Laravel, and headless WordPress. I managed projects independently, from gathering client requirements to delivering fully functional solutions.

VERWEB S. C.

Web Developer 2024

In my next role, I continued working as a WordPress web developer, performing similar tasks such as building and maintaining websites, developing custom plugins, and modifying themes. However, I also took on more responsibility for client communication, gathering requirements, and managing project expectations. I worked closely with clients to understand their business needs, propose solutions, and ensure their goals were met throughout the development process.

RUN BY IT SP. Z O.O.

Web Developer 2022-2024

I worked as a WordPress full-stack developer, gaining extensive experience with various tools, themes, and plugins within the WordPress ecosystem. I was responsible for building and maintaining websites and online stores tailored to clients' needs. My work included developing custom plugins from scratch and modifying existing ones to extend their functionality. Additionally, I customized themes to match unique designs and improve user experience.
